

Kramer Elementary

Oxford, OH

Kramer Elementary's new facility is the next phase of the school district's master plan. The new Kramer Elementary serves 650 students residing in the near city of Oxford, Ohio. The site work and completion of the substantial new building was on time and on budget. Bayer Becker provided the civil site design and land surveying services. Bayer Becker's innovative design solutions played a part in keeping this large undertaking on budget. To conserve costs, the design team was able to rethink the drainage plan and eliminate the need for an entire retaining wall.

The building, which replaced the former Kramer Elementary School, is the third new facility built in the district in recent years. The district operates five schools. Kramer Elementary is LEED Silver Certified.
